DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Louis J. Capezzuto on 5/30/07.

The application has been amended as follows:

Cancel claims 14-17.

In claim 25, line 1, replace "24" with -23--,

Line 2, delete "wherein".

Allowable Subject Matter

Claims 1-13, 18-23 and 25-27 are allowed.

The following is an examiner's statement of reasons for allowance:

A medical device and method for use inside a mammalian body comprising an insulated case having an electrically-conductive area that serves as an antenna for a transmitter and in which the transmitter is adapted to generate a signal that provides a position signal indicative of a six-dimensional position and orientation including X, Y, Z directions and pitch, yaw and roll orientations as claimed is not taught nor suggested by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 3762

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Sheldon et al (US 6,044,297) disclose an accelerometer that is capable of detecting X, Y, Z directions and pitch, yaw and roll orientation in an implantable device. Also, there is disclosed telemetry means for transmitting the data from the accelerometer to an external device. However, there lacks a teaching or suggestion to combine the accelerometer and telemetry means with a casing having an insulating material surrounding a conductive area in which the conductive area serves as an antenna.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to George Manuel whose telephone number is (571) 272-4952.
